Making your business space work harder

RADIOMETER

Open plan work area featuring desks with privacy screens and white pedestals

Glass door leading to open plan area featuring manifestation of Radiometer's logo

Tea point located outside conference room with a striking pink splashback

RADIOMETER

Radiometer are a leading provider of technologically advanced acute care solutions. Office Profile were commissioned by Radiometer to carry out a CAT-B refurbishment of their existing office space in Crawley, West Sussex.

The CAT-B fit-out across their first floor included the creation of multiple private offices for their senior staff, as well as an open plan office area, conference room and tea point. The existing office space was completely stripped out and a new raised access floor was installed along with suspended ceilings. A new fire door was also installed in the open plan area. New lighting was installed throughout the floor with motion sensors operating the lighting in the hallway area. The conference room was separated from the rest of the office by glass partitioning with integrated blinds for privacy when a meeting is taking place. Large manifestation of company branding was placed on the outside of the meeting room, along with Radiometer's logo on the glass door to the open plan area of the office.

- LOCATION: CRAWLEY, WEST SUSSEX
- VALUE: £100,000
- FLOOR AREA: 300SQM
- DURATION: 6 WEEKS
- STAFF NO: 27

Just outside of the conference room a tea point was installed with a striking pink splashback that contrasts the white cupboards and black worktop.

The open plan work area within the office featured comfortable chairs with added back support, along with desks with privacy screens in a pink colour that matches the tea point area's acrylic splashback. White desk pedestals were supplied under each desk to allow for convenient storage and to keep the area neat and organised. The pedestals were lockable for extra security.
